

Bertil Ohlsson AFMR 350/500 expander

Quality used expanding machine for the production of 35 liter pails. The AFMR machine is designed for automatic forming of cylindrical, soldered or welded bodies. The body can be formed to rectangular, oval or pear-shaped cross-section, depending on the tooling mounted in the machine. The AFMR machine is designed with two stations. In the first station the cylindrical body is overlap-controlled, i.e. the overlap is always placed in right position in relation to the cross-section of the body or decoration, if any. The overlap can be placed 360° along the whole circumference of the body. In the second station a tooling is mounted. This tooling makes the design of the body.

Technical specifications

CazProductNumber	2837
Name	Bertil Ohlsson AFMR 350/500
Function(s)	expander
Tooling	310 mm
Can height max	500 mm
Can end diameter max	350 mm
Can shape	round
